Investigation reason:	Other
Planned start:	12/May/26 9:00 AM
Planned end:	12/May/26 9:30 AM
First name:	TestUser
Last name:	Finance
Department:	Finance

Description

Symptoms

- Finance User was unable to sign in to a newly provisioned workstation.
- User reported that the entered credentials were correct, but authentication failed at Windows logon.

Scope / Impact

- Affected user(s): Finance user
- Device(s): Windows AD Client
- Department: Finance
- Business impact: User could not access the workstation to begin work

Environment

- Hostname: WindowsADClient
- OS: Windows 10
- Location/VPN: Internal lab / domain-connected workstation
- Related systems/services: Active Directory, Windows logon, domain authentication

Baseline Checks

- Connectivity: Workstation domain-connected
- Account status: Enabled, not locked out
- Licensing/access: N/A

- Error messages: Username or password incorrect at Windows login
- Recent changes: User on newly provisioned/reimaged workstation

Troubleshooting Performed

1. Reproduced failed sign-in using TestUserFin with the known correct password
2. Reviewed account details in the ADUC
3. Identified that the workstation required the domain-qualified username format
4. Retried sign-in using LAB\TestUserFin with the same password
5. Validated successful desktop access

Findings

- Password was valid
- User account was healthy
- Authentication failure was caused by incomplete username format at login

Root Cause

- User entered a non-domain-qualified username on a workstation/sign-in screen that required the domain-qualified format.

Resolution

- Corrected sign-in format from TestUserFin to LAB\TestUserFin
- User authenticated successfully with the same known password

Validation

- User confirmed: able to sign in
- Functionality tested: Windows/domain login successful
- Additional verification: desktop loaded successfully under the intended user session

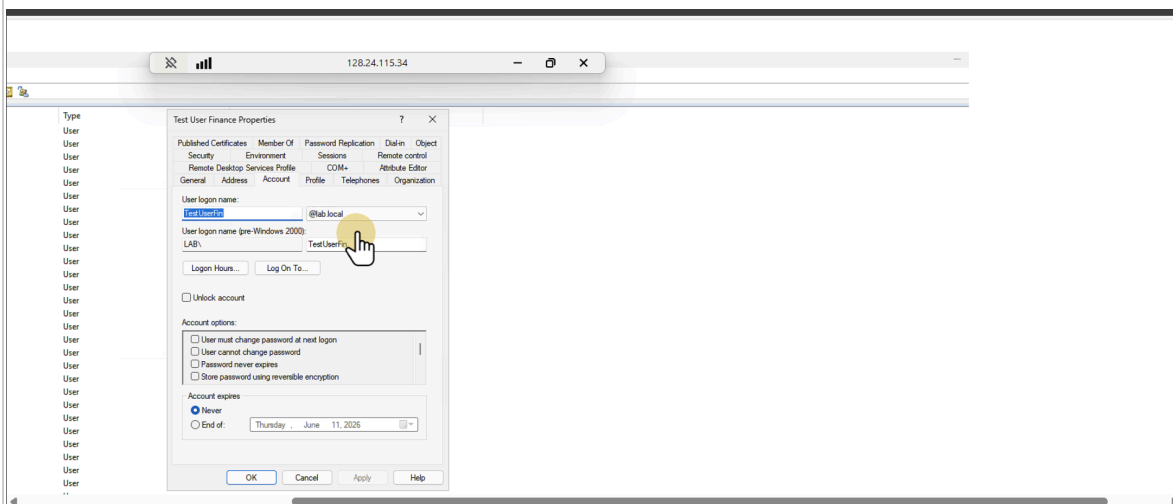

Closure Notes

- Issue resolved without password reset or account modification
- User was advised to use the domain-qualified username on the new workstation.

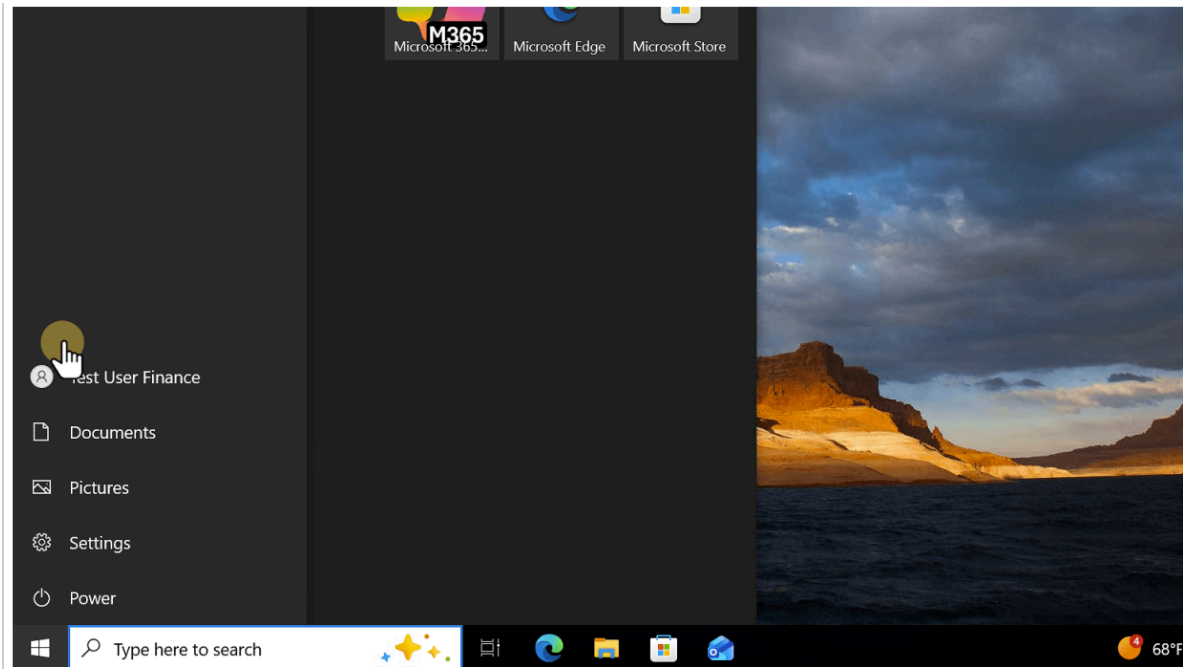

Comments

Comment by [David Dufour](#) [12/May/26]

Users logon name

Successful logon under domain qualified username format
