Request Type:	 Fix an account problem
Request language:	English
Request participants:	None
Organizations:	None
Investigation reason:	Other
Planned start:	13/May/26 4:30 AM
Planned end:	13/May/26 5:30 AM
Department:	Engineering

Description

Engineering user lost access to department file share after access cleanup removed required share-access group membership.

1. 1. Symptoms

- User reports Access Denied when opening the LAB-SHARE-01 shared folder
- User previously had access
- Other Engineering user are not reporting the same issue.

1. 1. Scope / Impact

- Affected user(s): test-user-Eng
- Device(s): Windows AD Client
- Department: Engineering
- Business impact: User cannot access share files needed for normal work.

1. 1. Environment

- Hostname:WindowsADClient
- OS: Windows 10 Pro
- Location/VPN: Internal lab / domain-connected client
- Related systems/services: Active Directory, Engineering share on LAB-SHARE-01, share-access security groups

1. 1. Baseline Checks

- Connectivity: Confirmed client could reach share path on LAB-SHARE-01
- Account status: USer account active and able to sign in to workstation
- Licensing/access: Issue is isolated to file share access, not general account access
- Error messages: Access Denied when attempting to open the share folder
- Recent changes: User had been removed from the share-related group membership during access cleanup.

1. 1. Troubleshooting Performed

1. Reproduced Access Denied when test-user-Eng attempted to open the shared folder on LAB-SHARE-01
2. Confirmed issue was limited to the affected user based on scope checks and no broader engineering outage reports

3. Reviewed share permissions on LAB-SHARE-01
4. Reviewed NTFS share permissions on the target shared folder
5. Verified access was assigned through security groups rather than direct user permissions
6. Reviewed affected user group membership in Active Directory
7. Identified that user-test-Eng was no longer a member of the required Engineering share-access group.
8. Refreshed user session and retested access

1. 1. Findings

- Affected user was missing the required Engineering share-access group membership
- Share and NTFS permissions were present and assigned to the correct access group
- No broader share or outage or server-side permissions failure was identified.

1. 1. Root Cause

- User was mistakenly removed from the required Engineering share-access group during access cleanup, which removed inherited access to the LAB-SHARE-01 shared folder

1. 1. Resolution

- Re-added test-user-Eng to the correct Engineering share-access group
- Refreshed user logon/session
- Retested access to the LAB-SHARE-01 shared folder successfully

1. 1. Validation

- User confirmed: User was able to access the LAB-SHARE-01 shared folder after group membership was restored
- Functionality tested: Opened LAB-SHARE-01 shared folder and verified access to and verified access to expected contents
- Additional verification: Confirmed share and NTFS permissions did not require further changes.

1. 1. Closure Notes

- Incident isolated to incorrect user group member ship
- No server outage or broader Engineering share issue found
- Access was restored after correcting the AD group membership.
