

[SDESK-4] Multiple Engineering users report Access Denied to shared folder. Created: 13/May/26 Updated: 14/May/26

Status:	To Do
Project:	IT Service Desk
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Submit a request or incident	Priority:	Medium
Reporter:	David Dufour	Assignee:	David Dufour
Resolution:	Unresolved	Votes:	0
Labels:	FileShare, GPOs		
Remaining Estimate:	0 minutes		
Time Spent:	1 hour		
Original estimate:	1 hour		

Request Type:	 Report a system problem
Request language:	English
Request participants:	None
Organizations:	None
First name:	test-user
Last name:	Eng
Department:	Engineering

Description

1. 1. Symptoms

- Multiple users in the Engineering department report that they can access the LAB-SHARE-01 shared folder but are unable to modify its contents.

1. 1. Scope / Impact

- Affected user(s): Engineering Dept
- Device(s): Windows AD Clients
- Department: Engineering
- Business impact: The entire Engineering dept is unable to modify files needed for regular work tasks

1. 1. Environment

- Hostname: WindowsADClient
- OS: Windows 10 Pro
- Location/VPN: Internal workstation/Domain connected system
- Related systems/services: Active Directory, Engineering, Share folder

1. 1. Baseline Checks

- Connectivity: Verified that users are able to access the shared folder
- Account status: All users accounts are active and no lockouts identified
- Licensing/access: N/A
- Error messages: Destination Folder Access Denied
- Recent changes: Recent folder permission clean up

1. 1. Troubleshooting Performed

- Verified user unable to modify shared-folders contents
- Confirmed the issue was related to share folder permissions and not standard user workflow or login access
- Confirmed that all users had the correct group membership to access shared folder
- Reviewed the share permissions of the share folder LAB-SHARE-01 were correct
- Reviewed the NTFS permissions of the target folder
- Identified the NTFS permissions for the Engineering group had been restricted to read and list contents in folder only.
- Restored the NTFS permissions to their operational modify baseline.
- Retested file creation and modification successfully

1. 1. Findings

- Engineering users could access the shared folder but could not modify its contents. A review of the target folders NTFS permissions revealed that they had been reduced below the intended operational modify baseline.
- AD group membership was correct and had no impact on users ability to modify target folders contents.
 - 1. 1. Root Cause
- The issue stemmed from a recent permissions clean up that resulted in the NTFS permissions for the Engineering dept to become restricted beyond operational baseline.
 - 1. 1. Resolution
- Changed the NTFS permissions on the target share folder to restore the Engineering depts access to modify as intended.
 - 1. 1. Validation
- User confirmed: Verified that users could access and modify target folders contents
- Functionality tested: Verified successful file creation
- Additional verification: Confirmed that share permissions did not require further changes.
 - 1. 1. Closure Notes
- Issue traced back to NTFS permissions misconfiguration on the target folder assigned to the Engineering dept had been restricted below their intended operational baseline.

Shared connectivity and group membership were functional throughout

Access restored to the target folder after correcting the NTFS permissions for the Engineering dept access group.
